About rawConverterPlus

rawConverterPlus is our standalone RAW conversion utility, designed to provide a simple and flexible workflow for converting camera RAW files into DNG, high-quality 16-bit TIFF, PNG and JPEG files.

With batch processing and selectable output formats, rawConverterPlus provides a practical solution for a wide range of RAW conversion requirements.

rawConverterPlus interface

Using rawConverterPlus

The rawConverterPlus interface is simple and consists of six main controls:

- 1. Drop Area** — Drag and drop camera RAW files into the window, or click to select them.
- 2. File Format Selection** — Select the output formats you want to create: DNG, TIFF, PNG and/or JPEG.
- 3. Convert** — Converts the selected RAW files into the chosen output formats.
- 4. Clear** — Removes the currently selected files from the conversion list.
- 5. Open Output Folder** — Opens the folder containing the converted files.
- 6. Help** — Opens a quick reference guide for using rawConverterPlus.

Once conversion is complete, rawConverterPlus gives a short system beep and automatically opens the output folder.

Where are the files saved?

Converted files are automatically organised into separate folders within:

Documents/rawConverterPlus

Each format is saved to its corresponding folder:

DNG · TIFF · PNG · JPEG

Files keep their original filename with the appropriate file extension.
